Robots that understand what needs to be done – and figure out how to do it

Binabik AI is developing an operating system for humanoid robots and industrial automation that allows them to take on different tasks ***without*** **being programmed for every movement individually**.

Called Binabik Brain, the software enables robots to **interpret tasks and combine learned movement skills** to translate them into physical actions. Potential applications span **manufacturing**, **logistics and retail**.

📍 Founded in #Winterthur by Jorge Peña Queralta, Pascal Sager, Harry Edelman, and Giovanni Toffetti, has strong ties to the ZHAW Centre for Artificial Intelligence (CAI) at ZHAW School of Engineering, where Jorge leads the Embodied Mo Agents Research Group.

See Binabik Brain live this week - at Startup Night Winterthur:
✅ Autonomous box handling by a humanoid robo
✅ Live product-packaging demonstration

Binabik AI is looking for manufacturing customers investors.
Meet Jorge Peña Queralta and Phillipp Gery on s
